

SOLATUBE INSTALLATION

PRODUCT INFORMATION

M.R. SITE SERVICES

Best known for developing the site welding of thin gauge aluminium for standing seam roofs in the 1980s, MR Site Services Ltd has made a significant contribution towards modern industrial and commercial architecture – and the striking roof lines of today owe their origins to this pioneering spirit.

This unparalleled level of expertise also positions MR Site Services as the leading exponent in creating watertight roof penetrations which are necessary for the installation of Solatube, as well as access hatches and soakers, into aluminium or steel standing seam roofs.

M.R. Site Services is fully skilled in carrying out the installation of Solatube through the roof profile, ensuring that in doing so the roof is not damaged and that the joint is fully weatherproof. The company can install Solatube through aluminium or steel roofs and has successfully completed hundreds of Solatube installations on time and on budget to the full satisfaction of clients.

Aluminium roofs

For aluminium roofs MR Site Services design and fabricate bespoke soakers to ensure that they match the Solatube diameter and roofing systems installed. These are welded into place using a specially developed site welding process, carried out by fully coded site operatives (see separate specification information).

Steel roofs

For steel and other types of roof, MR Site Services uses Quantum Roll-a-Flex (see separate specification) in conjunction with specially supplied steel soakers. Internationally recognised and covered by BBA certification, Quantum Roll-a-Flex can seal even the most problematic joints being permanently flexible with a high degree of stretch, providing a durable finish with the minimum of disruption. A ten year guarantee can also be made available on this product.

Installation

M.R. Site Services has 21 installation teams and engineers which are available on demand for all parts of the UK.

Certification

All engineers are CSCS card holders and are fully trained to up-to-date industry requirements. The company is also ISO 9001:2000 accredited, is a member of the NFRC and the Institute of Roofing.

Warranty

MR Site Services can offer warranty on any project through Alliance Warranty Management.

Sales and after-sales support

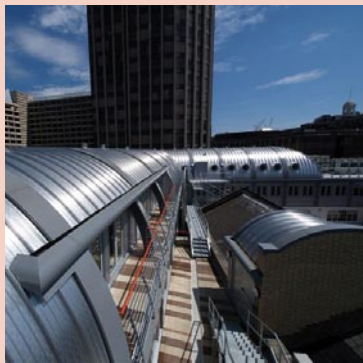

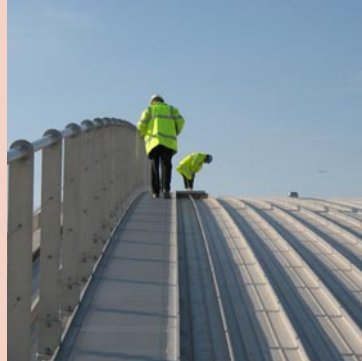

Back up and maintenance service is available. Call the sales office for more details.

OTHER PRODUCTS

PRODUCT INFORMATION

M.R. SITE SERVICES

In addition to Solatube, M.R. Site Services has much experience in the supply and fix of other roofing details including soakers, hips and valleys. It also offers a comprehensive fabrication service on a number of roof products from gutter and rainwater systems to access hatches, walkways and snow guards, all in its Quantum range.

Design

All products are bespoke CAD/CAM manufactured and a full design service using AutoCAD software is available.

Recent projects

M.R. Site Services has recently worked on a variety of exciting projects such as the Colchester Garrison in Essex, the Diamond Synchrotron in Oxford, the new RNLI building in Poole, and Xscape in Glasgow. The company is also involved up and down the country on many international airport projects including Birmingham, Doncaster and Cork as well as Heathrow Terminal 5.
